

## Press Release

### Bradford company introduces Drugalyser to UK

Modern Health Systems Ltd., has been working with Draeger Safety to help them develop and launch a new **drugalyser® road-side drug testing device**. This equipment has many operational qualities including an easy-to-use oral fluid drug test that is 'fit for purpose' for roadside drug testing and provides a print out of results at the scene.

Where suspicion of drug use arises the equipment can also **sweep suspect surfaces** such as steering wheels. In effect it is a portable laboratory.

The **drugalyser®** been developed by one of the world's leading European companies in collaboration with MHS and currently supplies 18 out of 44 UK Police forces with alcohol testing devices and most of the Fire and Rescue Services with safety equipment.

Former police Chief and Managing Director Les Vasey says: 'The early response from our customers has been excellent. ***In a short period of time we have sold several drugalysers® to our workplace customers and have 2 contracts with UK Fire and Rescue Services. We are in discussion with UK Police Forces***'

'Overseas Police Forces are currently at various stages of adopting the equipment' as shown:

#### Used for operational roadside testing in

- Germany (Thuringia and national police academy)  
On-going trials across all other Federal States
- Italy used operationally 20 city police forces
- Spain on-going trials
- Australia on-going trials

#### Approved for roadside drug testing in:

- Poland and Portugal
